Using UAV Collected Bridge Condition Data for a Rating Exercise

Intro to UAV-enabled methods to collect & process bridge condition data

Michigan Bridge Conference, 3/21/2017

Dr. Thomas Oommen, Dr. Tim Havens, Dr. Tess Ahlborn, Dr. Amlan Mukherjee, Dr. Kuilin Zhang, Rick Dobson, David Banach, Andrew Semenchuk, Jeff Bartlett, Dr. Rudiger Escobar Wolf, Sam Aden
MDOT 2nd phase project focused on implementation of UAVs

- “Implementation of Unmanned Aerial Vehicles (UAVs) for Assessment of Transportation Infrastructure”
- Project duration 5/1/16 – 5/31/18
- Building from first phase, “Evaluating the Use of Unmanned Aerial Vehicles for Transportation Purposes”, 5/22/13 – 11/30/14, focused on demonstrations
  - Bridge condition data
  - Traffic monitoring
  - Confined space inspection
  - Crash scene reconstruction
- [http://www.mtri.org/mdot_uav.html](http://www.mtri.org/mdot_uav.html)
The objectives of the Phase II research project are:

1. Develop, deploy, and implement **near-time data** collection communication backhaul and data storage capabilities proof of concept for the most viable UAV platforms and sensing capabilities.

2. Develop, deploy, and implement (via **pilot projects**) UAV data uses, analysis, and processing systems delivered from on-board sensors for two (2) to three (3) specific business functions/activities identified by MDOT.

3. Demonstrate, deploy, and implement (via pilot projects) **data quality protocols** to ensure data collected is accurate and within tolerance requirements when compared to current data collection systems at MDOT for the same two (2) to three (2) specific business functions/activities identified by MDOT.

4. Demonstrate a proof of concept for data collection uses UAVs for transportation purposes, beyond those proven during Phase 1, from **various highway assets**.

5. Coordinate/leverage ongoing and past research of UAV sensing and data collection technologies. **Provide device training and deployment/implementation plan**, including a user/operation guidance document.

6. Determine the **return on investment** (benefit/cost analysis) performed on UAVs and sensory technologies deployed for pilot studies performed for this research project.

7. Secure a **Federal Aviation Administration** (FAA) Certificate of Authorization (COA) to complete the below tasks and deliverables.
Bridge Field Data Collections

Warren Road (Maple River) – Str: 9852 – Shiawassee Co.
Gordonville Road (Little Salt Crk) - Str: 6999 – Midland Co.
Uncle Henry Road (U.Henry Drain) - Str: 9298 – Saginaw Co.
Beyer Road (Cheboyganing Crk) - Str: 9293 – Saginaw Co.
Methods – ground control needed

- Survey-quality ground control (cm accuracy) with Leica GPS to enable high-resolution referencing of point clouds, imagery, other UAV results
Methods: Thermal Sensors

- FLIR Tau 2 – 640 x 512 sensor
- FLIR Vue Pro -640 x 512 sensor (Pro R now available)
Methods: Optical Sensor

- Nikon D800 – full-sized (FX) sensor, 36.3 MP, 4 fps - $3,000
- 50mm prime lens ($800)
- Collect stereo overlapping imagery to create cm-resolution 3D surfaces
- New LiDAR sensor (Velodyne 16) coming

Taken from 25m
Methods: UAV Platforms

**Multiple platforms have been used based upon space and sensor size restrictions**

**Bergen Hexacopter** (made in MI)
- Price: ~ $5,000
- Flight time: 20 min
- Payload: 4.5 kg (~10 lbs)
- Built from USDOT OST-R CRS&SI project on Unpaved Road Assessment project [http://www.mtri.org/unpaved/](http://www.mtri.org/unpaved/)

**Aerostat / Tethered Blimp**
- Price: ~ $900
- Diameter: 1.7 m
- Net lift: 3.6 kg (~8 lbs)

**Imaging small quadcopters**
- DJI Phantom 2 Vision, 3 Advanced
- 3D Robotics IRIS+
- Mariner (waterproof)
- DJI Mavic Pro

**Micro-UAS quadcopters**
- Heli-Max 1Si, Walkera QR 100s, & Qualcomm Snapdragon
- Flight time: < 10 min
- Snapdragon has sense & avoid capabilities
- Size: fits in palm of hand
- Weight: < 1 lb
Method: Collect ground comparison data using existing tested NDT methods
Results: Georeferenced, high resolution optical, 3D, & thermal data
Results: UAV-based thermal imagery
Analyzing thermal results
Results: Optical and 3D data, Uncle Henry Rd bridge

- Delaminations
- Point Cloud
Data Management: Framework

- A meeting was held with MDOT Survey Support staff and SSI; plan developed:
  - Develop meta-data standards for the data that is being captured by UAV.
  - Using NCHRP Report 748, Table 1 & ASPRS Positional Accuracy Standards (2014) to classify the data quality.
  - Analyze work flows for two MDOT business processes:
    - Processes: Survey/Design and Construction Monitoring,
    - Map the decision-points in the workflows to data collected.
    - Address, the question: how does the collected data affect decision-making?
  - Conduct a life cycle cost analysis for alternative workflows.
Data Management: Make data accessible through software tools; Integrate into agency workflows and databases

DUAP, MiBRIDGE data sharing

ERDAS Apollo – data push, pull capabilities

Routine Surface Visual Inspection of a Bridge Deck Exercise

Uncle Henry Road over Uncle Henry Drain, Saginaw County.

Length of 59.7’ and width of 26.2’ (1564 sft)

Concrete Deck
A concrete or bituminous wearing surface should be inspected for spalling, cracking, scaling, and delamination. Timber wearing surfaces should be inspected for deterioration, splitting, and crushing. Rate and code the condition in accordance with the following guidelines. Concrete patches or concrete repaired areas that are sound and functioning properly should not be counted as deteriorated or deficient area. Concrete patches that are loose, delaminated, or generally in poor condition shall be counted as deteriorated or deficient area. Refer to Michigan Structure Inspection Manual (MiSIM) Section 5.05 for inspection procedures related to common surface materials.
Photos of Bridge

Spall 1

Spall 2

Spall 3

Spall 4

Spall 5

Transverse Cracks (Typical)
Concrete deck has scattered gravel. There is approximately 12 sft of spalls in 5 locations and approximately 15 sft of delamination in 5 locations. Largest spall at midspan centerline. Block cracking in the southeast corner in a 6'x6' area. Moderate map cracking in south lane. There are 6 transverse half width cracks. There is a monument in the deck near west abutment. There is debris along brush blocks. (10/16)

Conditions had minimal change over the last three inspections of the surface.

Total Deck Area = 1564 sft

Refer to the MDOT NBI Rating Guidelines provided to rate the surface with information provided.
# National Bridge Inventory Rating Scale

BSIR #1 Surface (SI&A Item 58A) Only Concrete Deck Descriptions are listed.

</tbody>
</table>

(a) Percent of deck surface area that is spalled, delaminated, or patched with temporary patch material.
(b) Percent of deck underside area that is spalled, delaminated or map cracked.
(c) The “Hold” option implies that there is on-going maintenance of filling potholes with cold patch and sealing of insipient spalls.
(d) Seal cracks when cracks are easily visible and minimal map cracking. Apply healer sealer when crack density is too great to seal individually by hand. Sustains the current condition longer.
(e) Crack sealing can also be used to seal the perimeter of deck patches.
(f) Hot Mix Asphalt overlay with waterproofing membrane. Deck patching required prior to placement of waterproofing membrane.
(g) Hot Mix Asphalt cap without waterproofing membrane for ride quality improvement. Deck should be scheduled for replacement in the 5 year plan.
(h) If bridge crosses over traveled lanes and the deck contains slag aggregate, do deck replacement.
(i) When deck bottom surface is rated poor (or worse) and may have loose or delaminated concrete or over traveled lanes, an in-depth inspection should be scheduled. Any loose or delaminated concrete should be scaled off and false deckling should be placed over traveled lanes where there is potential for additional concrete to become loose.

Bridge Deck Preservation Matrix

June 8, 2011  Rev.
Uncle Henry Road Bridge Potential Repair Work Example

Assuming it has the original concrete deck
Deck Bottom surface rating as Good (7).
We will be using the detailed inspection rating.
Rated the Deck Surface as Poor (4).
