

Asset Management for Water Systems: What Asset Management is and How it Can Help You

Comstock Park, MI | November 8, 2018 | 9:00AM-4:30PM

Kent District Library Meeting Center, 814 West River Center Drive NE, Comstock Park, MI 49321

About this Complimentary Workshop:

In this workshop, you will learn about how asset management can benefit your system. Not sure where to begin? We will explain how to get started with asset management and point you to resources you need. With limited revenues, aging infrastructure, and regulatory obligations to meet, a comprehensive approach to managing your system is vital. You may have problems related to unknown meter, valve, or hydrant locations. You may not be sure of which asset(s) to replace given limited funds. Asset Management can help you solve these problems, and more.

You will learn how to:

- Identify the 5 core components of asset management
- Develop an inventory of utility components
- Identify critical assets for sustained operations
- Make decisions about how to operate, maintain, repair, and replace those assets
- Set goals for level of service at a sustainable cost

CECs: This workshop will be submitted to the state for CECs for drinking water/wastewater operators.

Trainer: Heather Himmelberger – Director, Southwest Environmental Finance Center
