Great Lakes Environmental Infrastructure Center

Environmental Finance Center for EPA Region 5

Located on the Michigan Technological University campus – Houghton, Michigan

Who We Are

The Great Lakes Environmental Infrastructure Center (GLEIC) became the newest EPA Environmental Finance Center (EFC) in 2016, serving EPA Region 5 states— Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin. The GLEIC is part of the EPA EFC network, which is made up of 10 centers throughout the country.

The mission of the GLEIC is to partner with local, state, and tribal governments by providing targeted technical assistance, training, and research focused on innovative solutions to the challenges of reducing water pollution, air pollution, and solid waste.

The region is rich in water containing 90% of America's fresh water.

What We Do

The GLEIC promotes and supports the efficient management, maintenance, operation, and finance of municipally owned or controlled environmental systems.

These systems include infrastructure such as drinking water, stormwater, wastewater, and transportation systems; but, they also include community programs such as land-use planning, recycling, and solid waste and energy use reduction programs.

The GLEIC can support you in a variety of ways: connecting you with other professionals, offering trainings and technical assistance, and providing a wide variety of resources such as publications and research guidance projects, that offer best practice solutions to real world problems.

Currently, the primary focus of the GLEIC is water, wastewater, and stormwater infrastructure for rural and/or underserved communities. However, the center is prepared to offer technical assistance on a wide variety of topics, and hopes to continue to expand the services they provide to better serve local communities. Connect with us to share your ideas about how we can serve you better.

Transportation & the Environment Conference, co-hosted with the Michigan DEQ.

Experience

Located in the Department of Civil and Environmental Engineering at Michigan Technological University, the GLEIC has access to the newest technology, latest innovations, and a variety of field experts.

GLEIC team members are experienced in tackling civil, environmental, and geotechnical engineering; finance; economics; ecosystem evaluation; and sustainable energy challenges. Team members include faculty and research scientists at Michigan Technological University as well as professionals in tribal programs, technical writing, technical support, conference planning, information technology, and management.
